TEMPERATURE AND HUMIDITY SENSOR

L293D (16 PIN IC)

SOIL MOISTURE SENSOR

IBM IoT CLOUD

LIGHT INTENSITY SENSOR

pH SENSOR

ARDUINO-UNO

MOBILE APP

OPEN WEATHER API

- The different soil parameters (temperature, humidity, light intensity, pH level) are sensed using different sensors and the obtained value is stored in IBM cloud.
- Arduino uno is used as a processing unit which processes the data obtained from sensors and weather data from weather API.
- Node red is used as a programming tool to wire the hardware, software and APIs. The MQTT protocol is followed for communication.
- All the collected data are provided to the user through a mobile application which was developed using MIT app inventor. The user could make decision through an app, whether to water the crop or not depending upon the sensor values.
